

**TEXTILES**

A UNIT OF DCM NOUVELLE LIMITED

**DCM Textiles (A Unit of DCM Nouvelle Limited)** has spindle capacity of 1,15,048 with 2500 MT of monthly production. Today DCM Textiles is a leading manufacturer & exporter of 100% cotton carded and combed yarns in single and two-ply forms of count range Ne 14s to 40s. With the introduction of brands of premium quality combed & carded yarns, "PRIMERO" & "DINERO" respectively; GOTS & BCI Certifications and Slub Yarn, DCM Textiles has moved ahead in positioning itself as supplier of quality yarn for finest clothing.

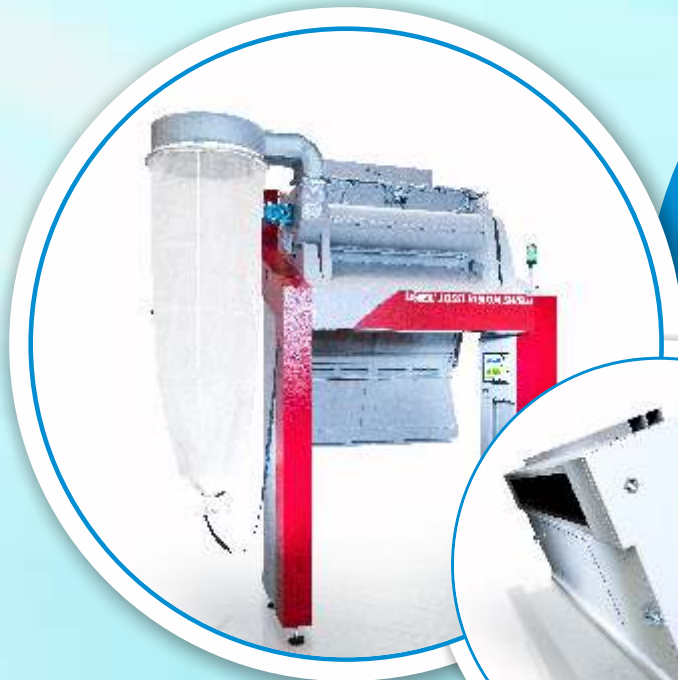

DCM Textiles' continuous involvement in value addition brings yet another better product

**is contamination controlled 100% cotton combed knitting yarn processed through advanced contamination control systems.**

### **Installation of Advance Contamination Control Systems: THE TWO STAGE SOLUTION**

i.e. to remove contaminations at two vital stages of production, in the blowroom and at winding using a coordinated approach

The first control point is at blowroom stage. The blow room is equipped with "USTER® JOSSI VISION SHIELD and USTER® JOSSI MAGIC EYE 2" as contamination clearing system.

It removes all kinds of natural & synthetic material, including white transparent polypropylene.

The second control point is at winding stage. The yarn is autoconed at Link cones equipped with "Uster Quantum 3 with Polypropylene (PP) & Dark Foreign Fibre (FFD)" clearing devices that ensures removal of Polypropylene and colored contaminants.

This combination of USTER JOSSI VISION SHIELD WITH USTER JOSSI MAGIC EYE 2 and USTER QUANTUM 3 results in Contamination Controlled Yarn. These two control systems, acting in tandem, have the technological sophistication for detecting & removing contamination at the beginning and end of the yarn production process i.e. in fiber preparation and yarn clearing. All types of foreign matter – natural and synthetic – even white polypropylene are identified and removed.

## Salient Features of

- ✦ The fabric knitted will have controlled contamination level suitable for bleach & light shades.
- ✦ Polypropylene contamination in dark shade fabric will be subdued to great extent.
- ✦ The feel of the finished fabric is smooth & soft.
- ✦ Excellent fabric appearance.
- ✦ Reduction in wastage in fabric cutting.
